Your wallet. Your control.

A familiar start.
A wallet you control.

01 Create wallet

02 Add passkey

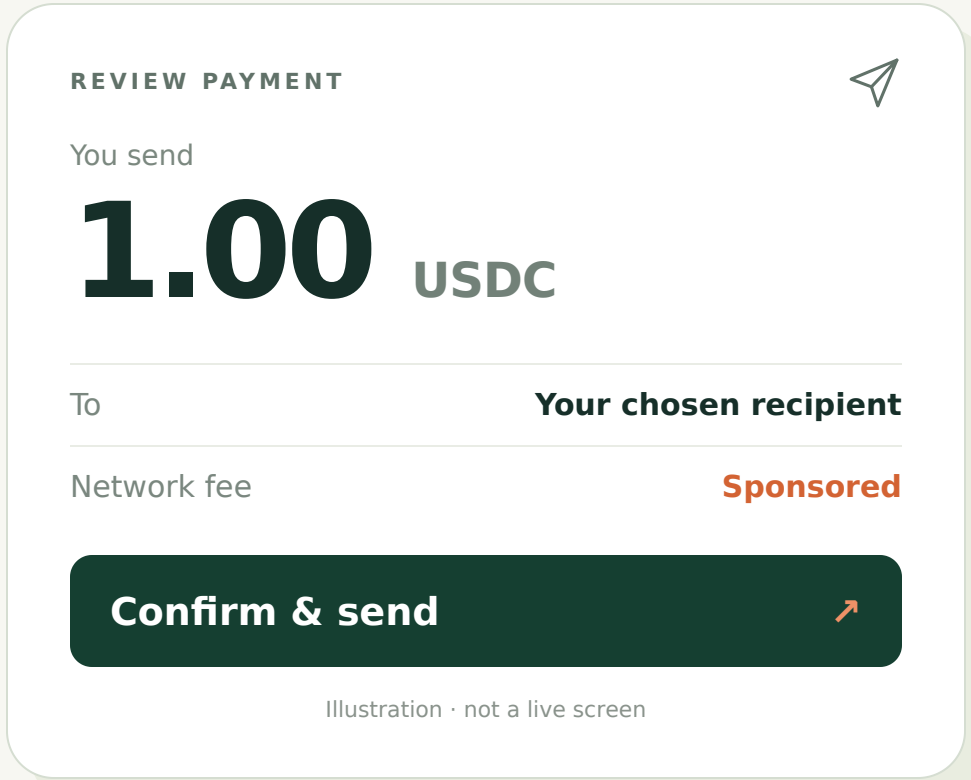

03 Save backup

BIP-39 seed **Encrypted on device** **Passkey authentication**

Passkeys confirm identity. A separate unlock protects your payment key.

Send with confidence.

- **Review the recipient**
- **Screen before sponsoring**
- **Extra check for larger payments**

Demo: above 5 USDC, confirm with a passkey. Screening hits block our sponsor—not the blockchain.

Tokens out. Fees covered.

EVM · BUILT

Sign. We relay.

0 ETH needed in your wallet

SOLANA · PROPOSED

Sign together.

SOL fees paid by the sponsor

The sponsor pays the network fee. It does not receive your spending key.

Lost phone. Not lost access.

KEPT BY YOU

Recovery Card

A separate recovery key

+

Partner

3-minute test wait

OR

Swissquote

3-day configured wait*

=

Access restored

Same wallet. New key.

Your card + one helper. Neither helper alone.

Separate approval keys—not pieces of one seed. *Full 3-day route not demonstrated; helper vaults and identity checks are mocked.

New key. Same wallet.

OLD KEY

Retired

Same wallet.

Same address.
Same balances.

Owner changes

NEW KEY

Fresh start

New 24-word seed | **Encrypted backup** | **Separate kit code**

Applies to this existing EVM Safe. Ordinary Solana and Bitcoin addresses change with a new key; those chains are not implemented.

Lost ≠ leaked.

DEVICE LOST · KEY PROTECTED

Recover access.

Card + one helper
Wait → Restore

PRIVATE KEY EXPOSED

Act immediately.

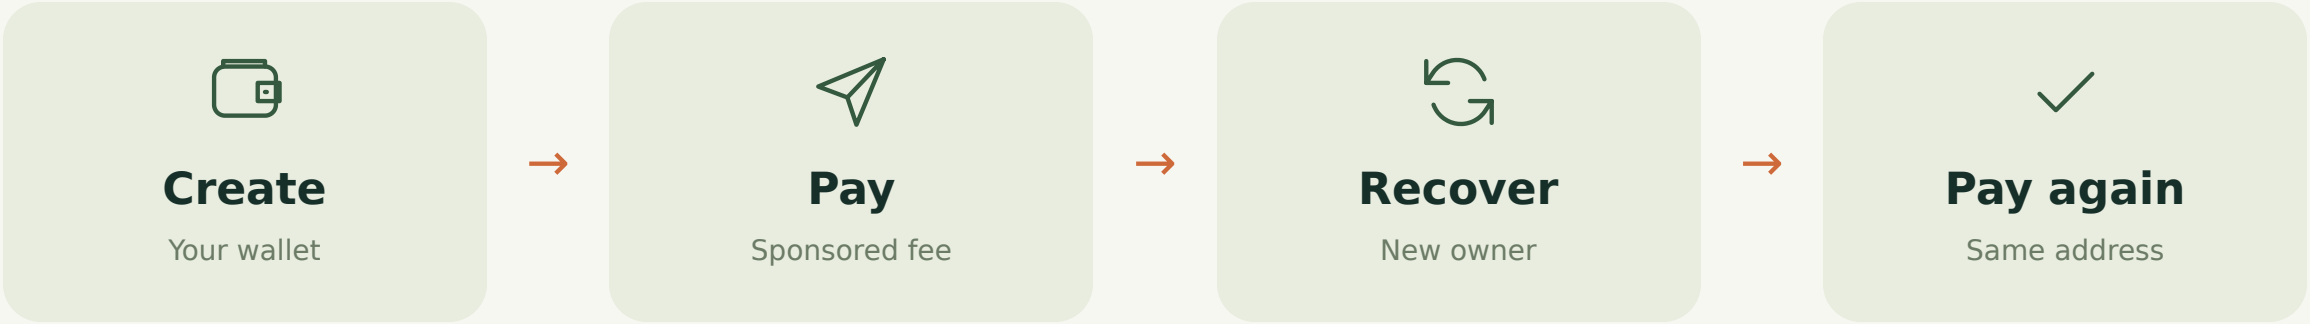

Replace the key if still in control.
Move funds if the wallet is compromised.

A leaked key can spend now. Recovery cannot reverse theft.

Use a clean device. Cancel pending recoveries and save a new kit. An attacker can race you.

PROOF + NEXT STEP

Built. Tested. Next: a pilot.

PUBLIC ETHEREUM TEST NETWORK

Working recovery.
Ready for the next test.

Next: an audited, legally reviewed pilot.

Prototype evidence—not a security audit. Recovery resumed across sessions. Passkeys used a virtual authenticator. Banking and helper vault protection are mocked.
