01 · THE CLIENT

Own keys should not mean leaving Swissquote.

Swissquote account

Claire’s crypto

Client story · illustrative persona

withdraw

Wallet elsewhere

Her keys.
A separate experience.

Keep control. Keep the relationship.

Three objects. Three clear jobs.

01 / Phone

Pay with the client’s key.

02 / Recovery Card

Replace a lost phone,
with one helper.

03 / Emergency Kit

Encrypted key backup.
Separate code to open it.

Help with recovery — no bank-only payment key.

Keep the card, kit and code separate. Never project their contents.

Browser payments and apps reached the public chain.

1 USDC payment

RECORDED BROWSER RUN

Client and wallet held zero ETH.
Swissquote service paid gas.
Payment receipt 0xe3188195… ↗

1 USDC Compound supply

RECORDED BROWSER RUN

Third-party Compound III test deployment.
Approve → supply → approve zero.
Supply receipt 0xa44904bd… ↗

> Older payment / Compound runs are separate from the verified browser recovery on the next slide.

Sepolia test tokens, no cash value. No withdrawal or swap demonstrated. Live on-stage readiness needs human rehearsal.

Same wallet. New owner. Payment proved.

Before replacement

Create wallet → fund 2 USDC →
old owner pays 1 USDC →
card + partner starts recovery.

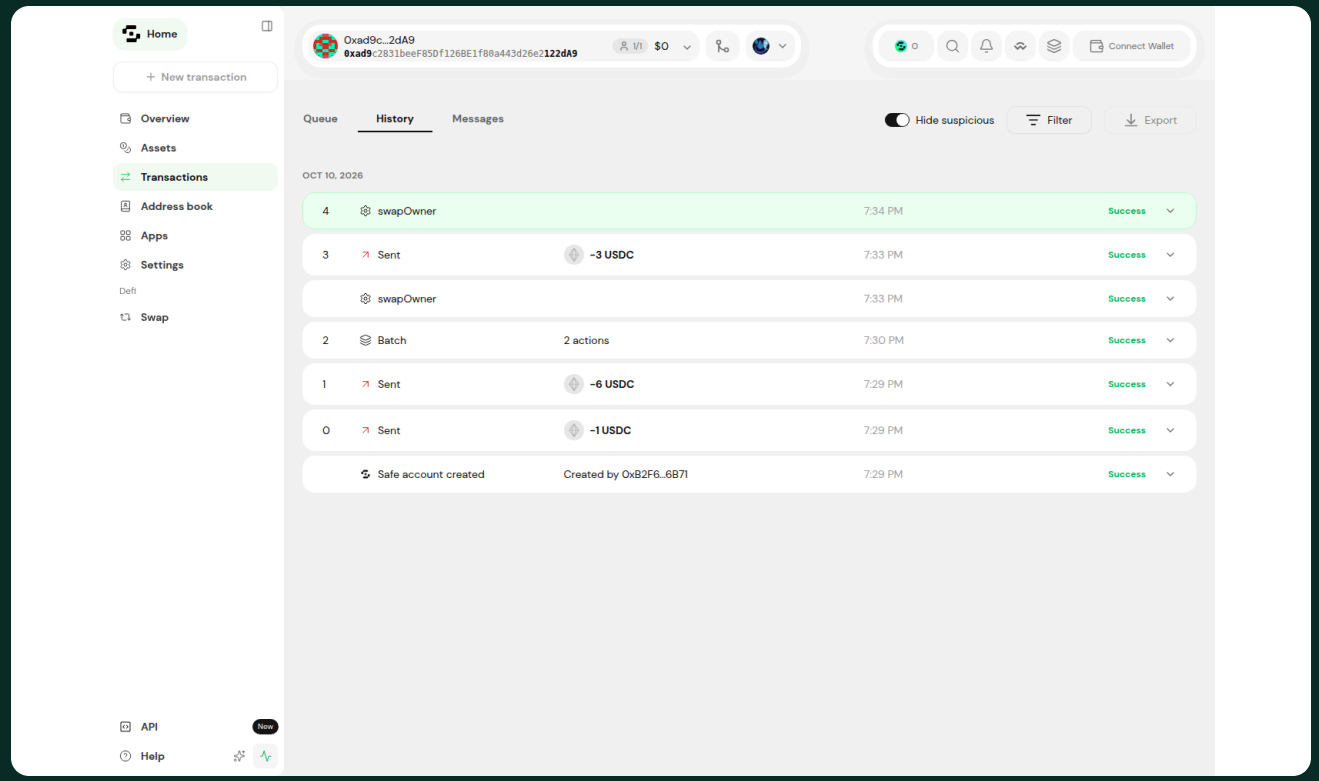

After the real chain wait

Finalize → new owner pays 1 USDC.
Old key refused: read-only GS026.
New kit decrypts offline; owner matches.

Browser recovery verified on Sepolia
· resumed across retained browser sessions

Same wallet 0x9BAE…6E5c · actual 180-second delay + 15-second buffer; no clock manipulation.
MOCK identity / bank / helper checks; virtual WebAuthn, hardware pending. Three-day route not run in G1.
Kit owner check is not a kit-broadcast exit. An accessible owner key can spend and cancel recovery.

Safe shows the wallet. The kit exit ran by script.

Existing Safe history capture · read-only public view

Two different proofs

Safe UI: visibility and interoperability. Not demonstrated independent signing.

Kit script: moved 3 USDC using the recovered key, RPC only.

Scripted kit exit 0xbc661bfd… ↗

A separate test account paid the fee. This was not a live shutdown drill.

Client control is the argument — not regulatory approval.

Who can move funds?

Owner key pays.
Card + one helper can replace it after a wait.

At the bank door

A one-time signed challenge proves wallet control.
Identity checks are MOCK.

We argue software, not bank-only custody.

Legal interpretation only. Counsel must assess recovery mandates, sponsored fees and ownership proof. No FINMA approval claimed.

Clients keep their keys. Swissquote keeps the relationship.

Retained clients × Annual trading volume per client × Net revenue rate

Measure retention before promising revenue.

Pilot outcome

Compare retention and trading with a matched client group.

Optional recovery service

Test paid take-up.
Do not assume subscription demand.

Illustrative model, not a forecast. CHF 640k inputs are unconfirmed and intentionally omitted. Sponsorship cost needs a measured gas budget.

Claire keeps control. Swissquote keeps Claire.

Recovery help without a bank-only payment key.

Inspect the historical wallet in Safe’s own app.

Open verified Safe history ↗

Sepolia · 0xad9c…2dA9

Team names and public repository URL: HUMAN PENDING.
Prototype for the Swissquote challenge; not an endorsed bank product.

The contracts are real. Back-office identity is MOCK.

Client wallet · REAL

Creates and locks owner key.
Signs payments.

Recovery Desk · REAL

Local card approvals and kit opening.
Independent publisher: NOT YET.

Safe app · READ-ONLY

Separate interface.
Reads the same public wallet.

Signed payment → fee service → Sepolia contracts

Swissquote services

Fee relayer + live screening.
MOCK: account, KYC, mailbox, helper vault.

Partner process

Card + partner route.
MOCK: face check, helper vault.

Public chain · REAL

Safe 1.4.1 · two recovery modules · USDC.

EVM only. Existing Safe/Candide libraries; no homemade cryptography. Our composition is not audited.

An accessible owner key can spend. Recovery is not magic.

Attacker / failure	What the evidence supports
Swissquote + partner, no card	Both locks refused their signatures in recorded read-only calls.
Stolen phone + email	Outcome depends on access to the owner key. Do not promise immunity.
Unlocked / compromised owner key	Can spend immediately and cancel recovery.
Stolen card + fooled helper	Can request takeover after a wait; owner can cancel while available.
Malicious wallet update	Real client-side key theft risk. Independent publisher not delivered.
Phone, card, kit and code all lost	No bank rescue promised; funds may be unrecoverable.

The phone creates the key. Extra checks guard sponsorship.

Creation flow

Offline desk makes Recovery Card → app receives public address → MOCK identity enrolment → phone creates encrypted key → Safe deployed → one-time ownership proof → encrypted kit saved.

Signing flow

Small payment: owner key signs.
Above demo limit of 5 USDC: transaction-bound passkey approval for the Swissquote service.

> Owner key + self-paid gas bypasses the service’s passkey and screening rules.

Recorded browser authenticator is virtual, not Touch ID / hardware proof. No creation video available in this package.

B4 · PUBLIC EVIDENCE

Different wallets prove different parts of the story.

Evidence	Mode / wallet	Receipt or result
Wallet + payment	Recorded browser · 0x4386…C219	0xe3188195… ↗
Compound supply	Recorded browser · 0x9C26…7B51	0xa44904bd… ↗
180-second recovery	Recorded SCRIPT · 0xad9c…2dA9	0x1231c281… ↗
Cardless helpers / old key	Recorded read-only contract calls	Refused; no transaction sent.
Kit-key exit	Recorded SCRIPT · RPC only	0xbc661bfd… ↗
G1 browser recovery	Retained browser sessions 0x9BAE…6E5c	Finalize 0x2de7323c… ↗ New payment 0xaf43a7e7… ↗

All receipts are Sepolia. Older payment / Compound reports did not test recovery or kit. G1 verifies recovery and kit owner, not kit exit.

Use evidence cards when live media is unavailable.

Offline fallback · AVAILABLE

These slides, public Safe screenshots, linked receipt IDs and printable judge cards. Explain resumed-session browser recovery and historical scripted kit exit separately.

Human confirmation · PENDING

Hardware passkey rehearsal · creation clip · Compound preview image · freeze test count · team names · AI-tool disclosure · public repo permission.

> No progress / error during a human-approved live demo? Return to the evidence slide. No missing-video promise.

Old overnight timeline is expired. Slot, roles and live-vs-recorded choices require a current human decision.
